Tanlac Elements Come From Many Lands Far Away From Here.

The ingredients from which the celebrated medicine Taniac is made, come from remote sections of the earth, and are transported thousands of infles over land and sea to the great Tunke Laboratories at Dayton, Ohio, and Walkersville, Canada.

The Alps, Appenines, Pyrenees, Russian Asia, Brazil, West Indies, Rocky Mountains, Asia Minor, Persia, India,
Mexica, Columbia and Pera are
anent of Agriculture.)

After the ducklings have been conthe principal properties of this remarkable preparation are obtained.

What is said to be the largest pharmaceutical laboratory in the United States has been completed at Dayton, Ohio, for the manufacture of Tanlac. which, according to recent reports, is now having the largest sale of any medicine of its kind in the world, ever 20,000,000 bottles having been sold in six years.

The new plant occupies 80,000 square feet of floor space and has a daily capacity of 50,000 battles. Unfform quality is guaranteed by a series of careful inspections by expert chemists from the time the roots, herbs, burks and flowers are received in their rough state from all parts of the globe, until their medicinal properties have been extracted by the most approved processes. The finished medicine is then bottled, labeled and shipped out to tens of thousands of druggists throughout the United States and Camela, to supply a demand never before equalled by this or any other

Taniac is sold by leading druggists everywhere .- Advertisement.

Time Enough. "Am I right in surmising that you have something of serious import to say to my daughter?"

## WINDBREAK OF BIG BENEFIT

Blowing of Top Soil May Be Checked and Dust Storms Prevented by Planting Trees.

Movement of the top soil may be checked and dust storms prevented by breaking the force of the wind. For this reason windbreaks are of immense benefit in sandy regions or in regions where the soil is very fine.

The early feeding of the young chicks is the most important part of their growth. Right feeding of good materials will start the digestive tract right and get them in order.

Walnuts Burled in Shallow Pit and -Transplant in Spring.

A simple and successful method of planting black wainut discovered by a farmer in Indiana, is related in Farmers' Bulletin 1123, Growing and Planting Hardwood Seedlings on the Farm, just published by the United States Department of Agriculture. The specialists may that this method should be equally successful with oaks, bickories, butternut, or any oth-

er hardwood species which develop pronounced taproots and in consequence cannot be transplanted with any large measure of success from the nursery to the field. This farmer buried the walnuts in a shallow pix where they were subjected throughout the winter to the action of motor ture and frost. With the advent of spring the nuts began to sprout. He planted the sprouted nuts on welltilled land by scooping out a little soil with his hands, placing the nuts in the holes thus formed and covering

In following this plan there are several precautions which should be taken: (1) The pit in which the nuts are stored should be located in a welldrained, shaded spot; (2) The nuts examined frequently in the spring so them out soon after sprouting com-
